EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with ----- on 5-20-5.

3. The application has been amended as follows:

Claim 19, line12: "PCT" had been changed to ---PCR---

Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

Regarding claim 18, the prior art fails to teach or suggest a method for evaluating in real time a packet stream having a plurality of packets, said method comprising the steps of "said extracting step (b) comprises the steps of b1) computing a total unit of bit time by multiplying a number of received packets with a number of bits per packet; and b2) computing a total unit of bit time by multiplying a difference between a current program clock reference (PCR) value and a last PCR value with a bit rate in units of bits per PCR tick," in combination with other limitations, as specified in the independent claim 18.

Regarding claim 19, the prior art fails to teach or suggest a method for evaluating in real-time a packet stream having a plurality of packets, said method comprising the steps of "said extracting step (b) comprises the steps of b1) computing a total unit of bit time by multiplying a number of received packets with a number of bits per packet; and b2) computing a total unit of bit time by multiplying a difference between a current recorded program clock reference (PCR) value and a last recorded PCR value with a bit rate in units of bits per PCR stick," in combination with other limitations, as specified in the independent claim 19.

Regarding claim 22, the prior art fails to teach or suggest a computer readable medium having stored thereon a plurality of instructions, the plurality of instructions including instructions which, when executed by a processor, cause the processor to perform the steps comprising of "said extracting step (b) comprises the steps of b1) computing a total unit of bit time by multiplying a number of received packets with a number a bits per packet; and b2) computing a total unit of bit time by multiplying a difference between a current program clock reference (PCR) value and a last PCR value with a bit rate in units of bits per PCR stick," in combination with other limitations, as specified in the independent claim 22.

Regarding claim 23, the prior art fails to teach or suggest a computer readable medium having stored thereon a plurality of instructions, the plurality of instructions including instructions which, when executed by a processor, cause the processor to perform the steps comprising of "said extracting step (b) comprises the steps of b1) computing a total unit of bit time by multiplying a number of received packets with a

number of bits per packet; and b2) computing a total unit of bit time by multiplying a difference between a current recorded program clock reference (PCR) value and a last recorded PCR value with a bit rate in units of bits per PCR tick," in combination with other limitations, as specified in the independent claim 23.

Regarding claim 26, the prior art fails to teach or suggest an apparatus for evaluating in real time a packet stream having a plurality of packets, said apparatus comprising "said extracting means computes a total unit of bit time by multiplying a number of received packets with a number of bits per packet, and computes a total unit of bit time by multiplying a difference between a current program clock reference (PCR) value and a last PCR value with a bit rate in units of bits per PCR tick," in combination with other limitations, as specified in the independent claim 26.

Regarding claim 27, the prior art fails to teach or suggest an apparatus for evaluating in real time a packet stream having a plurality of packets, said apparatus comprising "said extracting means computes a total unit of bit time by multiplying a number of received packets with a number of bits per packet, and computes a total unit of bit time by multiplying a difference between a current recorded program clock reference (PCR) value and a last recorded PCR value with a bit rate in units of bits per PCR tick," in combination with other limitations, as specified in the independent claim 27.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
